Title: Tip of hair pencil

Claim:

A tip 1 of a hair pencil composed of hairs 10, 20, 30 made of a synthetic resin and being tapered at their ends, characterized in that said tip 1 is configured by a blended hair body consisting of straight hair of large diameter, crimped hair of medium diameter, and hair of small diameter having crimps lower height than the crimps of the medium diameter hair.

INDUSTRIAL FIELD OF THE INVENTION

This invention relates to a tip such as of writing brush and hair pencil for calligraphy.

EMBODIMENT

Fig. 1 and Fig. 2 show one embodiment of the present invention. The reference numeral 1 designates a tip of 5.2cm long and 10.4mm thick, and 2 a shaft cylinder.

In the tip 1, its rear end prevents the hair from escape by a suitable fixing means such as melt deposition, joint adhesion or winding with thread, and the tip 1 is inserted into and secured to the front end of the shaft cylinder 2.

References 10, 20 and 30 are writing hairs made of nyloy 6, 12 constituting the tip. The writing hair 10 is composed of straight fibers of 0.2mm diameter, the writing hair 20 is composed of fibers having crimps of 0.1mm diameter, and the writing hair 30 is composed of fibers of 0.07mm diameter and having crimps lower in height than the crimps of said writing hair 20, and their using

ratio is such that the hair 10 is 30% by weight, the hair 20 is 30% by weight and the hair 30 is 40% by weight.

**Brief Description of the Drawings:**

Fig. 1 is a perspective view of the end of the hair pencil mounted with the tip; and

Fig. 2 is plan views showing the essential parts of the hair to be the constitutional element of the tip, which is not taper processed.
